Managing System Testing for PeopleSoft

System Testing after an upgrade, patch or tax updates, or during an implementation is critical to your company's business processes being accurate prior to being "Live" in Production. PeopleSoft offers a tool that can assist with testing efforts after it is properly installed and setup at your site.

Companies can take advantage of the PTF for various reasons that include, lack of time, limited available resources, missing or limited test scripts, highly customized environment, or employee turnover.

Aaron Whincop Inc engages with clients to assist with setup and configuration of the PeopleSoft Testing Framework for a fixed fee.

Below are facets of the PeopleSoft Testing Framework

- ❖ PTF is a recording/playback application
- ❖ Automates testing of all modules within the application
- ❖ Create test cases in the Explorer for testing
- ❖ Test cases can be migrated to other instances
- ❖ PeopleTools 8.51 or higher is required
- ❖ PTF is a standalone program and runs on the Windows client
- ❖ Connection is secured through IB Web Services
- ❖ Increases efficiency and accuracy
- ❖ Reduces testing time and resources

Planning from clients is essential to ensure that the system testing engagement is successful. We suggest that your planning include:

- ❖ Identify and plan PTF usage areas early
- ❖ Train users on the PTF record and playback features
- ❖ Identify key business processes to test
- ❖ Prepare test cases for documentation
